	PREAMBLE	1
1.	FOREWORD	2
2.	GUIDE TO THE SYLLABUS	3 – 4
3.	SYLLABUS	5 – 68

Topic Area I Differential Equations

Unit 1 First Order Differential Equations and its Applications 5 – 10

1.1 Basic Concepts and Ideas
1.2 Formation of Differential Equations
1.3 Solution of Equations with Variables Separable
1.4 Solution of Linear Differential Equations
1.5 Solution of Equations Reducible to Variables Separable Type or Linear Type

Unit 2 Second Order Differential Equations and its Applications 11 – 18

2.1 Classification of Types
2.2 Principle of Superposition
2.3 Solution of Homogeneous Equations with Constant Coefficients
2.4 Solution of Non-homogeneous Equations with Constant Coefficients
(a) Complementary function and particular integral
(b) Method of undetermined coefficients
2.5 Reduction of Equations to Second Order Differential Equations with Constant Coefficients
2.6 Systems of two First Order Differential Equations
2.7 Applications in Practical Problems

Topic Area II Numerical Methods

Unit 3 Interpolation and Lagrange Interpolating Polynomial 19 – 22

3.1 Interpolation and Interpolating Polynomials
3.2 Construction of Lagrange Interpolating Polynomials
3.3 Use of Lagrange Interpolating Polynomial
3.4 Error Estimation of Interpolating Polynomial

Page

Unit 4 Approximation 23 – 27

4.1 Treatment of Errors, their Estimation and Algebraic Manipulation
(a) Three basic types of errors
(i) Inherent error
(ii) Truncation error
(iii) Round-off error
(b) Absolute and relative error
(c) Estimation of errors
(d) Combining errors
4.2 Approximation of Functional Values using Taylor's Expansion
(a) Taylor's series expansion of a function
(b) Error estimation

Unit 5 Numerical Integration 28 – 32

5.1 Numerical Integration
5.2 Trapezoidal Rule
(a) Derivation of the trapezoidal rule
(b) Estimation of the error
(c) Application of trapezoidal rule
5.3 Simpson's Rule
(a) Derivation of Simpson's rule
(b) Estimation of the error
(c) Application of Simpson's rule

Unit 6 Numerical Solution of Equations 33 – 39

6.1 Method of Fixed-point Iteration
(a) Algorithm of the method
(b) The condition of convergence
(c) Estimation of error
6.2 Newton's Method
(a) Algorithm of the method
(b) The condition of convergence and error estimation
(c) Application of Newton's method
6.3 Secant Method
(a) Derivation of the secant method
(b) Application of the secant method
6.4 Method of False Position
(a) Derivation of the method of false position
(b) Application of the method of false position

		Page
Topic Area III	**Probability and Statistics**	
Unit 7	**Introductory Probability Theory**	40 – 45
7.1	Basic Definitions	
7.2	Ways of Counting	
7.3	Probability Laws	
7.4	Bayes' Theorem	
7.5	Recurrence Relation	
Unit 8	**Basic Statistical Measures**	46 – 47
8.1	Basic Knowledge	
8.2	Calculation of Mean	
8.3	Calculation of Standard Deviation and Variance	
Unit 9	**Random Variables, Discrete and Continuous Probability Distribution**	48 – 61
9.1	Random Variable	
	(a) Discrete probability function	
	(b) Probability density function	
9.2	Expectations and Variances	
9.3	Binomial Distribution	
	(a) Binomial trials, Binomial probability	
	(b) Binomial distribution	
	(c) Applications	
9.4	Normal Distribution	
	(a) Basic definitions	
	(b) Standard normal curve and the use of normal table	
	(c) Applications	
	(d) Binomial approximated to normal distribution	
9.5	Linear Combination of Independent Normal Variables	
Unit 10	**Statistical Inference**	62 – 68
10.1	Basic Concept	
10.2	Estimation of a Population Mean from a Random Sample	
10.3	Confidence Interval for the Mean of a Normal Population with Known Variance	
10.4	Hypothesis Testing	
10.5	Type I and Type II Errors	
APPENDIX: MATHEMATICS REFERENCE BOOKS		69 – 72
Membership of Curriculum Development Council Applied Mathematics Subject Committee (Sixth Form)		73 – 74
